**APPE Adult Medicine PRCT 586 Heart Failure Management**

Directions: Identify one patient with heart failure. If for some reason such a patient cannot be identified at your site, role-play with another student, health professional, or your preceptor and complete the following:

How long has the patient had heart failure? What is the most commonly used classification system for heart failure, and how is each patient classified in that system? (Question 1 of 5 - Mandatory)

What type of maintenance therapy is the patient receiving for heart failure? Is the patient currently controlled on the regimen? What classes of drugs are primarily used to treat heart failure patients? (Question 2 of 5 - Mandatory)

What is diuretic resistance? How is this phenomenon overcome? (Question 3 of 5 - Mandatory)

What therapeutic, adverse effect, labs, or other parameters are being monitored in the patient (if applicable)? Are there other concerns? (Question 4 of 5)

Are there any changes to the patient's medication regimen that should be made based on your assessment? If so, describe your recommendations below. (Question 5 of 5)

Review your answers in this evaluation. If you are satisfied with the evaluation, click the SUBMIT button below. Once submitted, evaluations are no longer available for you to make further changes.
